DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4 and 10, drawn to a sealing device comprising an enclosure with moving shield, a cutter and a motor, classified in class 422, subclass 99.
 - II. Claims 5-9 and 11-12, drawn to a sealing device comprising a cutter and a motor, classified in class 407 subclass 20.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the sealing device of group I as claimed does not require the particulars of the cutting element, such as the wire. The device of group II can be used, for example, as a shutter or actuator.
3. Note that the claims of group II, if elected, are subject to further restriction, since they are directed to the following patentably distinct species of the claimed invention:

Art Unit: 1743

Species I, claims 5-7 and 11, drawn to a sealer with a spring-loaded member configured to 'urge a test sample device against a fixed structure';

Species II, claims 8-9 and 12, drawn to a sealer with a motor configured to drive and adjust the cutting element in both vertical and horizontal directions;

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1743

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Mr. Samir Patel on 05/30/2007 to request an oral election to the above restriction requirement, but did not result in an election being made.
